Useful R Syntax

Chris McNeil

2021-05-11

Contents

Chapter 1

Introduction

This document is a collection of useful code for Rmarkdown and R

I have used the mtcars dataset if possible

I have used the Tidyverse and the pipe (%>%) if possible

I recommend that the code is checked for warnings that is is not depreciated

1.1 Structure of collection

- 1. Rmarkdown
  - formatting basics
- 2. Rstudio
  - load/unload packages
  - print figures to files
  - Libraries/packages
  - essential/useful packaged
- 3. Data wrangling
  - load dataset
  - clean environment
  - check for duplicates
  - Merging datasheets
  - Merging datasets
  - Reshaping

Figure 1.1: Don't Panic

  - recode factors
  - dealing with missing data
  - Data reduction with PCA
  - Data standardisation

- 4. Statistical analysis

- 5. Data Visualisation

  - Tables
  - Plots

Chapter 2

RMarkdown

This chapter contains syntax for the non-code rmarkdown sections.

2.1 Formatting basics

```
*** on it own, for a horizontal line
**text** for bold
*text* for italics
1. Item 1
2. Item 2
3. Item 3
    + Item 3a
    + Item 3b for ordered lists

[linked phrase](http://example.com) for links
 ![alt text](figures/img.png) for images

### R chunk basics
message=FALSE, warning=FALSE, include=FALSE, ECHO=FALSE (show output),

To set document default knitr::opts_chunk$set(echo=FALSE)
```

Chapter 3

Rstudio

This chapter contains syntax for manipulating data and packages within the R studio environment.

3.1 Useful packages

Load all libraries

```
library(tidyverse) # data handling and viz
library(janitor) #dataframe import cleaning
```

```
## Warning: package 'janitor' was built under R version 4.0.5
```

```
##
## Attaching package: 'janitor'
```

```
## The following objects are masked from 'package:stats':
##
##     chisq.test, fisher.test
```

```
library(knitr) #nice html tables
```

```
## Warning: package 'knitr' was built under R version 4.0.5
```

```
library(kableExtra) # nicer knitr tables
```

```
## Warning: package 'kableExtra' was built under R version 4.0.5
```

```
##
## Attaching package: 'kableExtra'
```

```
## The following object is masked from 'package:dplyr':
##
##     group_rows
```

```
library(broom)
```

```
## Warning: package 'broom' was built under R version 4.0.5
```

```
library(readr) # load csv stored data
library(geosphere) # for calc daylength
```

```
## Warning: package 'geosphere' was built under R version 4.0.5
```

3.2 Remove a package

```
#Unload a module:
library(clipr) #load
```

```
## Welcome to clipr. See ?write_clip for advisories on writing to the clipboard in R.
```

```
detach(package:clipr) #unload
```

3.3 Import using Janitor

```
# Create a data.frame with dirty names
test_df <- as.data.frame(matrix(ncol = 6))
names(test_df) <- c("firstName", "ábc@!*", "% successful (2009)",
                    "REPEAT VALUE", "REPEAT VALUE", "")
head(test_df)
test_df <- test_df %>%
  clean_names()
head(test_df)
```

```
##   firstName ábc@!* % successful (2009) REPEAT VALUE REPEAT VALUE
## 1        NA     NA                   NA           NA           NA NA
##   first_name abc percent_successful_2009 repeat_value repeat_value_2  x
## 1         NA  NA                      NA           NA             NA NA
```

Reference

3.4 Remove dataframe

```
data("mtcars")
data("band_instruments")
data("band_instruments2") # Load example datasets

rm(list=ls()[! ls() %in% c("band_instruments","band_instruments2")]) # Everything except Band ins
rm(list=setdiff(ls(), "band_instruments")) # Everything except "bandinstruments"
rm(list=ls()) # Remove everything
```

Reference:Stackoverflow

3.5 Save dataframe (CSV or Rdata)

make date string

```
datenow <- format(Sys.time(), "_%Y_%m_%d")
date
data(mtcars)
```

```
## function ()
## .Internal(date())
## <bytecode: 0x000000000e4256c0>
## <environment: namespace:base>
```

Write file names

```
#create data directory
dir.create("data_out")
```

```
## Warning in dir.create("data_out"): 'data_out' already exists
```

name	band
Mick	Stones
John	Beatles
Paul	Beatles

```
filenamecsv <- paste("data_out/mtcsvdata",datenow,".csv",sep="")
filenamerda <- paste("data_out/mtrdadata",datenow,".rda",sep="")
```

Save the files

```
save(mtcars,file=filenamerda)
write.csv(mtcars,file=filenamecsv)
```

3.6 Save a diagram or plot

```
plot1 <- mtcars %>% ggplot(aes(hp,qsec))+geom_point()
#plot1 #print plot if required
pdf("plot.pdf")
plot1
dev.off()
```

```
## pdf
##   2
```

pdf 'device' off.

3.7 Recode a text variable

```
data("band_members")
kable(head(band_members)) %>% kable_minimal(full_width = F)
band_members <- band_members %>% mutate(name=recode(name, "Mick"= "m"))
kable(head((band_members))) %>% kable_minimal(full_width = F)
rm(list=ls()) # Remove everything
```

Reference: Kable Extra

name	band
m	Stones
John	Beatles
Paul	Beatles

	mpg	cyl	disp	hp_new	drat	wt	qsec	vs	am	gear	carb
Mazda RX4	21.0	6	160	110	3.90	2.620	16.46	0	1	4	4
Mazda RX4 Wag	21.0	6	160	110	3.90	2.875	17.02	0	1	4	4
Datsun 710	22.8	4	108	93	3.85	2.320	18.61	1	1	4	1
Hornet 4 Drive	21.4	6	258	110	3.08	3.215	19.44	1	0	3	1

Valiant	18.1	6	225	105	2.76	3.460	20.22	1	0	3	1

3.8 Alter variable names:

Remove underscores

```
data("mtcars")
mtcars <- mtcars %>% rename(hp_new=hp)
kable(head((mtcars))) %>% kable_minimal(full_width = F)

mtcars <- mtcars %>% rename_with(.fn = ~str_replace(., "_", ""))
kable(head((mtcars))) %>% kable_minimal(full_width = F)
```

	mpg	cyl	disp	hpnew	drat	wt	qsec	vs	am	gear	carb
Mazda RX4	21.0	6	160	110	3.90	2.620	16.46	0	1	4	4

Datsun 710	22.8	4	108	93	3.85	2.320	18.61	1	1	4	1
Hornet 4 Drive	21.4	6	258	110	3.08	3.215	19.44	1	0	3	1
Hornet Sportabout	18.7	8	360	175	3.15	3.440	17.02	0	0	3	2
Valiant	18.1	6	225	105	2.76	3.460	20.22	1	0	3	1

Chapter 4

Data Wrangling and manipulation

```
library(Hmisc) #impute values
```

```
## Warning: package 'Hmisc' was built under R version 4.0.5
```

```
## Loading required package: lattice
```

```
## Loading required package: survival
```

```
## Loading required package: Formula
```

```
##
## Attaching package: 'Hmisc'
```

```
## The following objects are masked from 'package:dplyr':
##
##     src, summarize
```

```
## The following objects are masked from 'package:base':
##
##     format.pval, units
```

```
library(naniar) # deal with NAs
```

```
## Warning: package 'naniar' was built under R version 4.0.5
```

```
library(geosphere)
```

```
## Warning: package 'geosphere' was built under R version 4.0.5
```

```
library(tidyverse) # data handling and viz
library(janitor) #dataframe import cleaning
```

```
## Warning: package 'janitor' was built under R version 4.0.5
```

```
##
## Attaching package: 'janitor'
```

```
## The following objects are masked from 'package:stats':
##
##     chisq.test, fisher.test
```

```
library(knitr) #nice html tables
```

```
## Warning: package 'knitr' was built under R version 4.0.5
```

```
library(kableExtra) # nicer knitr tables
```

```
## Warning: package 'kableExtra' was built under R version 4.0.5
```

```
##
## Attaching package: 'kableExtra'
```

```
## The following object is masked from 'package:dplyr':
##
##     group_rows
```

```
library(broom)
```

```
## Warning: package 'broom' was built under R version 4.0.5
```

```
library(readr) # load csv stored data
library(geosphere) # for calc daylength
```

4.1 Bin variable (e.g. Low/Medium/High)

```
data(mtcars)
mtcars <- mtcars %>% mutate(hp_cat=cut(hp, breaks=c(-Inf, 100, Inf),
                                       labels=c("low hp","high hp")))
```

4.2 Conditional function

```
mtcars <- mtcars %>% mutate(loghp=ifelse(cyl>4,log10(hp),NA))
# Nonsensical example, but log transformed all horse powers of cars with more
# than four cylinders
```

4.3 Sum across rows

```
mtcars <- mtcars %>%  mutate(sum = select(., disp:drat) %>%
apply(1, sum, na.rm=TRUE))
#apply() takes Data frame or matrix as an input and gives output in vector
#(i.e.many columns to one list)
# the '1' sets the dataframe to use (already selected here)
```

Reference

4.4 Standardise variable

```
dat2 <- mtcars %>%
    as_tibble() %>%
    mutate(across(where(is.numeric), scale))

funcs <- list(mean = ~mean(.x,na.rm = TRUE),
  sd = ~sd(.x,na.rm = TRUE)
)
dat2 %>% summarise(across(where(is.numeric),funcs))
```

```
## # A tibble: 1 x 26
##   mpg_mean mpg_sd  cyl_mean cyl_sd disp_mean disp_sd  hp_mean hp_sd drat_mean
##      <dbl>  <dbl>     <dbl>  <dbl>     <dbl>   <dbl>    <dbl> <dbl>     <dbl>
## 1 7.11e-17      1 -1.47e-17      1 -9.08e-17       1 1.04e-17     1 -2.92e-16
```

```
## # ... with 17 more variables: drat_sd <dbl>, wt_mean <dbl>, wt_sd <dbl>,
## #   qsec_mean <dbl>, qsec_sd <dbl>, vs_mean <dbl>, vs_sd <dbl>, am_mean <dbl>,
## #   am_sd <dbl>, gear_mean <dbl>, gear_sd <dbl>, carb_mean <dbl>,
## #   carb_sd <dbl>, loghp_mean <dbl>, loghp_sd <dbl>, sum_mean <dbl>,
## #   sum_sd <dbl>
```

4.5 Conditional Replacement

Replace all 'NA's in a specified variable with 0.

```
mtcars <- mtcars %>% mutate(loghp1 = coalesce(loghp, 0))
#or
mtcars <- mtcars %>% mutate(loghp = replace_na(loghp, "missing"))
```

4.6 Filter na's or retain complete cases

```
mtcars <- mtcars %>% filter(!is.na(hp)) # no missing values found
mtcars <- mtcars %>%filter(complete.cases(.)) # no missing values found
```

4.7 Delete specified columns

```
mtcars1 <- mtcars %>% select(-(drat)) # single column
mtcars2 <- mtcars %>% select(-c(drat,hp,vs:gear)) # multiple columns

rm(list=setdiff(ls(), "mtcars")) # clean environment
```

##Change specific datapoint

```
mtcarsmissingvalues <- mtcars %>% mutate(gear=ifelse(gear==5,"missing",gear))
```

4.8 Find duplicate rows

```
# specify which variable to check for duplication
n_occur1 <- data.frame(table(mtcars$mpg))
kable(n_occur1[n_occur1$Freq > 1,]) %>% kable_styling(full_width = F) %>% kable_minimal
```

	Var1	Freq
1	10.4	2
6	15.2	2
14	19.2	2
16	21	2
17	21.4	2
19	22.8	2
23	30.4	2

4.9 Impute missing values

4.9.1 To be completedImputing missing values using the mean:

```
#create missing values
#mtcarsmissingvalues <- mtcars %>% mutate(gear=ifelse(gear==5,"",gear))

mtcarsmissingvalues <- mtcars %>% replace_with_na(replace = list(gear = 5))
mtcarsmissingvalues$gear <- impute(mtcarsmissingvalues$gear, mean)  # replace with mean
mtcarsmissingvalues$gear <- impute(mtcarsmissingvalues$gear, median) # median
mtcarsmissingvalues$gear <- impute(mtcarsmissingvalues$gear, 4) # replace specific number
```

Reference:

4.10 Keep rows based on a unique value.

e.g. prescription code

```
mtcarsdistinct <- mtcars %>%    distinct(cyl, .keep_all= TRUE)
```

Reference

4.11 Delete rows on a variable value

```
mtcars1<-mtcars %>% filter(!(cyl==6))
mtcars2<-mtcars %>% filter(!(cyl==6 | hp==180)) # | is the 'or' operator
mtcars3<-mtcars %>% filter(!(cyl==8 & hp==215)) # & is the 'and' operator
# remove the ! To select the individuals with the specified conditions
```

4.12 Use if else to calculate on values

```
# no NA's so all values unchanged.
mtcars <- mtcars %>% mutate(vs=ifelse(is.na(vs),(carb-am)/365.25,vs))
```

4.13 Merge data frames (variables)

*left_join(x, y): returns all rows from x, and all columns from x and y. Rows in x with no match in y will have NA values in the new columns. If there are multiple matches between x and y, all combinations of the matches are returned.

*inner_join(x, y): returns all rows from x where there are matching values in y, and all columns from x and y. If there are multiple matches between x and y, all combinations of the matches are returned.

*full_join(x, y): returns all rows and all columns from both x and y. Where there are not matching values, the function returns NA for the one missing

- inner: only rows with matching keys in both x and y
- left: all rows in x, adding matching columns from y
- right: all rows in y, adding matching columns from x
- full: all rows in x with matching columns in y, then the rows of y that don't match x.

```
# prepare new dataset
# make the rownames into a 'joinable' column
mtcars <- mtcars %>% mutate(carnames=rownames(mtcars))
mtcars_extradata <- mtcars %>% select(cyl)
# make the rownames into a 'joinable' column
mtcars_extradata <- mtcars_extradata %>%
mutate(carnames=rownames(mtcars_extradata))
mtcars_extradata <- mtcars_extradata %>% mutate(valves=cyl*4)
mtcars_extradata <- mtcars_extradata %>% select(-cyl)

kable(glimpse(mtcars_extradata%>% slice(1:6))) %>%
  kable_styling(full_width = F) %>%
  kable_minimal()

mtcars <- left_join(mtcars,mtcars_extradata,by = 'carnames')

kable(glimpse(mtcars %>%select(carb:valves) %>%  slice(1:6))) %>% kable_styling(full_w
  kable_minimal()
```

	carnames	valves
Mazda RX4	Mazda RX4	24
Mazda RX4 Wag	Mazda RX4 Wag	24
Datsun 710	Datsun 710	16
Hornet 4 Drive	Hornet 4 Drive	24

## $ valves   <dbl> 24, 24, 16, 24, 32, 24
```

4.14 Merge data frames (individuals)

```
mtcarsmerged <- bind_rows(mtcars2, mtcars3)
rm(list=setdiff(ls(), "mtcars")) # clean environment
```

Reference

4.15 Create a new factor from existing

```
mtcars <- mtcars %>% mutate(cyc_carb = paste(cyl,carb,sep="-"))
```

4.16 change data types

(merging fails if data types are different)

```
# adni_demog<-adni_demog %>% mutate(age_scan=as.numeric(age_scan))
# ukbb<-ukbb %>% mutate(scan_no=as.numeric(scan_no))
```

4.17 calculate dates and photoperiod

(using geosphere library)

```
#import sample dataset
dateslat <- read_csv("dateslat.csv")
```

```
##
## -- Column specification --------------------------------------------------------
## cols(
##   `ID's` = col_double(),
##   `date (dmy)` = col_character(),
##   latitude = col_double()
## )
```

```
dateslat <- dateslat %>%
  clean_names()

dateslat <- dateslat %>% mutate(dateofscan=(as.Date(date_dmy,format="%d/%m/%Y")))
dateslat <- dateslat %>% mutate(daylength=daylength(latitude,dateofscan))

dateslat %>% ggplot(aes(x=dateofscan,y=daylength)) +geom_line() +theme_minimal()
```

4.18 Reduce variables using PCA

4.18.1 To be completed

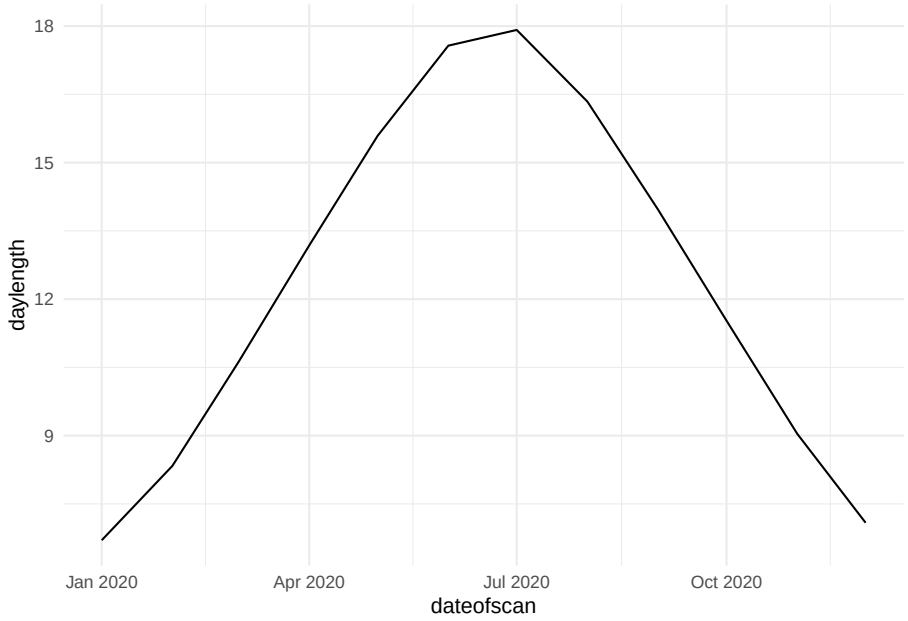

Figure 4.1: **CAPTION THIS FIGURE!!**

Chapter 5

Statistical Analysis

5.1 Regression

5.1.1 Linear regression on groups

```
kable(mtcars %>%  group_by(as.factor(gear)) %>%
summarise(mean = mean(qsec), sd = sd(qsec))) %>%
  kable_styling(full_width = F) %>%
  kable_minimal()

#Run the same linear regression model by group levels?
#Instead of running #summary(lm(y~x)) for the number of levels
#you have, you can use the R package "broom" along with dplyr.

# Run the same regression model for gears ##
kable(mtcars%>% group_by(gear) %>%
  do(fitgear = glance(lm(hp~qsec, data = .))) %>%
  unnest(fitgear),digits=2) %>%   kable_styling(full_width = F) %>%
  kable_minimal()
```

Chapter 6

Data Visualisation

Tables and graphs, survival plots, missing values. ## Summary Tables

6.0.1 Packages needed

6.0.2 Summarise by group

```
data(mtcars)
kable(mtcars %>% group_by(cyl) %>% summarise(Ave=mean(hp), StDev=sd(hp))) %>%
  kable_styling(full_width = FALSE) %>% kable_minimal()
```

6.0.3 Summary Table - Multiple functions, variables

```
# make sure brackets are correct

df.sum <- mtcars %>%  select(mpg,cyl,hp) %>%
  summarise(across(everything(),list(mean=mean,sd=sd)))
kable(df.sum,digits=2) %>% kable_styling(full_width = FALSE) %>%
  kable_minimal() # perform the analysis
```

cyl	Ave	StDev
4	82.63636	20.93453
6	122.28571	24.26049
8	209.21429	50.97689

mpg_mean	mpg_sd	cyl_mean	cyl_sd	hp_mean	hp_sd
20.09	6.03	6.19	1.79	146.69	68.56

Attribute	mean	sd
mpg	20.09	6.03
cyl	6.19	1.79
hp	146.69	68.56

```
df.longer <- df.sum%>% pivot_longer(col=everything(),
names_to = c("Attribute",".value"),
  names_sep = "_")
kable(df.longer,digits=2) %>%
  kable_styling(full_width = FALSE) %>%
  kable_minimal() # pivot longer the analysis to make it readable
```

6.1 Specific package for summary tables:

6.1.1 Arsenal package

```
tab1 <- tableby(cyl~gear+hp+wt,data=mtcars)
summary(tab1, text=TRUE, digits=2, digits.p=2, digits.pct=1)
```

	4 (N=11)	6 (N=7)	8 (N=14)	Total (N=32)	p value
gear					0.01
- Mean (SD)	4.09 (0.54)	3.86 (0.69)	3.29 (0.73)	3.69 (0.74)

6.2.1 Data Frame Summary

6.2.1.1 mtcars

Dimensions: 32 x 11
Duplicates: 0

No	Variable	Stats / Values	Freqs (% of Valid)	Graph	Missing
1	mpg [numeric]	Mean (sd) : 20.1 (6) min < med < max: 10.4 < 19.2 < 33.9 IQR (CV) : 7.4 (0.3)	25 distinct values		0 (0.0%)
2	cyl [numeric]	Mean (sd) : 6.2 (1.8) min < med < max: 4 < 6 < 8 IQR (CV) : 4 (0.3)	4 : 11 (34.4%) 6 : 7 (21.9%) 8 : 14 (43.8%)		0 (0.0%)
3	disp [numeric]	Mean (sd) : 230.7 (123.9) min < med < max: 71.1 < 196.3 < 472 IQR (CV) : 205.2 (0.5)	27 distinct values		0 (0.0%)
4	hp [numeric]	Mean (sd) : 146.7 (68.6) min < med < max: 52 < 123 < 335 IQR (CV) : 83.5 (0.5)	22 distinct values		0 (0.0%)
5	drat [numeric]	Mean (sd) : 3.6 (0.5) min < med < max: 2.8 < 3.7 < 4.9 IQR (CV) : 0.8 (0.1)	22 distinct values		0 (0.0%)

No	Variable	Stats / Values	Freqs (% of Valid)	Graph	Missing
6	wt [numeric]	Mean (sd) : 3.2 (1) min < med < max: 1.5 < 3.3 < 5.4 IQR (CV) : 1 (0.3)	29 distinct values		0 (0.0%)
7	qsec [numeric]	Mean (sd) : 17.8 (1.8) min < med < max: 14.5 < 17.7 < 22.9 IQR (CV) : 2 (0.1)	30 distinct values		0 (0.0%)
8	vs [numeric]	Min : 0 Mean : 0.4 Max : 1	0 : 18 (56.2%) 1 : 14 (43.8%)		0 (0.0%)
9	am [numeric]	Min : 0 Mean : 0.4 Max : 1	0 : 19 (59.4%) 1 : 13 (40.6%)		0 (0.0%)
10	gear [numeric]	Mean (sd) : 3.7 (0.7) min < med < max: 3 < 4 < 5 IQR (CV) : 1 (0.2)	3 : 15 (46.9%) 4 : 12 (37.5%) 5 : 5 (15.6%)		0 (0.0%)

No	Variable	Stats / Values	Freqs (% of Valid)	Graph	Missing
11	carb [numeric]	Mean (sd) : 2.8 (1.6) min < med < max: 1 < 2 < 8 IQR (CV) : 2 (0.6)	1 : 7 (21.9%) 2 : 10 (31.2%) 3 : 3 (9.4%) 4 : 10 (31.2%) 6 : 1 (3.1%) 8 : 1 (3.1%)		0 (0.0%)

6.3 Correlation matrix

6.3.1 Ellipse style

```
corrdata <- mtcars %>% select(-c(cyl,disp,vs,am,gear,carb))
corr1 <- Hmisc::rcorr(as.matrix(corrdata))
M <- corr1$r
M

colnames(M) <- c("mpg", "HP", "Axle Ratio", "Weight (kPounds)", "Quarter Mile (s)")
rownames(M) <-  c("mpg", "HP", "Axle Ratio", "Weight (kPounds)", "Quarter Mile (s)")
p_mat <- corr1$P
corr <- corrplot(M, type = "upper",method="ellipse", order = "hclust",
         p.mat = p_mat, sig.level = 0.05, insig = "blank")
```

```
##              mpg         hp        drat         wt        qsec
## mpg   1.0000000 -0.7761684  0.68117191 -0.8676594  0.41868403
## hp   -0.7761684  1.0000000 -0.44875912  0.6587479 -0.70822339
## drat  0.6811719 -0.4487591  1.00000000 -0.7124406  0.09120476
## wt   -0.8676594  0.6587479 -0.71244065  1.0000000 -0.17471588
## qsec  0.4186840 -0.7082234  0.09120476 -0.1747159  1.00000000
```

- Red is -ve correlation
- Blue is + ve correlation
- Blank is no correlation

6.4 Graphing

6.4.1 Frequency Histogram - basic

```
plot1 <- mtcars %>% ggplot(aes(qsec))+geom_histogram()
plot1
```

```
## `stat_bin()` using `bins = 30`. Pick better value with `binwidth`.
```

6.4.2 Frequency Histogram + normal distribution

```
plot1 <- mtcars %>% ggplot(aes(qsec))
plot1+geom_histogram()
```

```
## `stat_bin()` using `bins = 30`. Pick better value with `binwidth`.
```

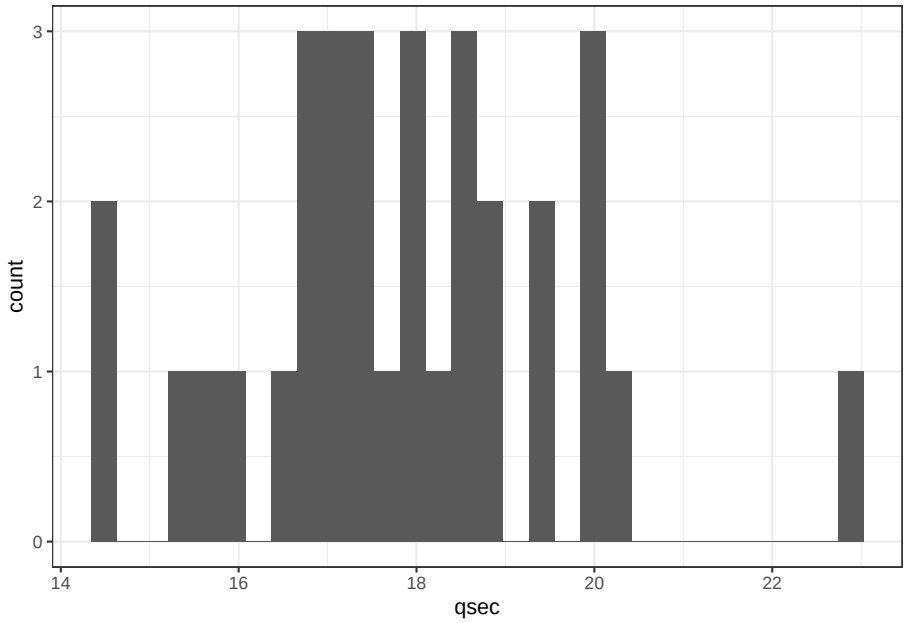

Figure 6.2: **CAPTION THIS FIGURE!!**

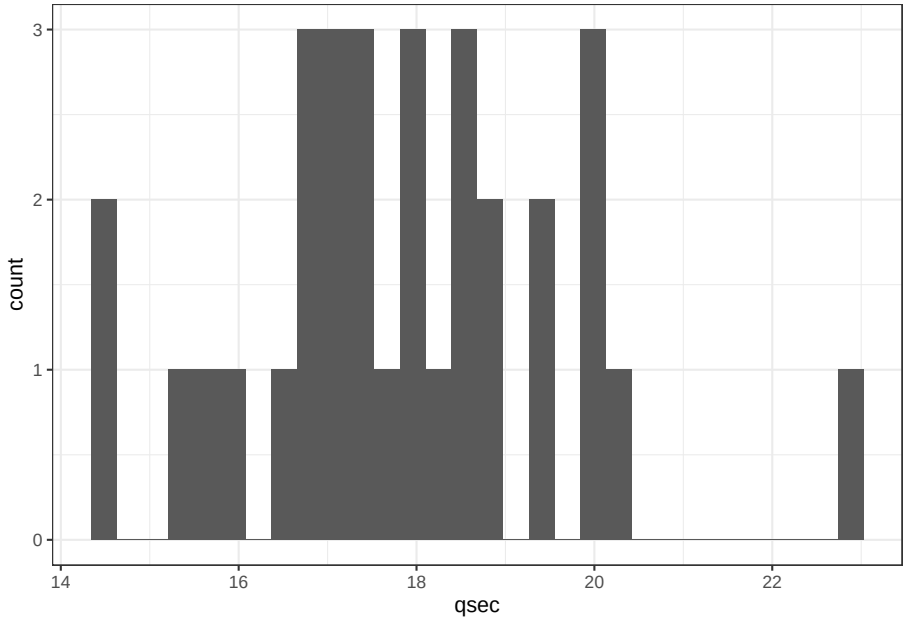

Figure 6.3: **CAPTION THIS FIGURE!!**

```
# add normal plot
plot1 + geom_histogram(aes( y=..density..))+stat_function(fun = dnorm, args = list(mean =mean(mtc
```

```
## `stat_bin()` using `bins = 30`. Pick better value with `binwidth`.
```

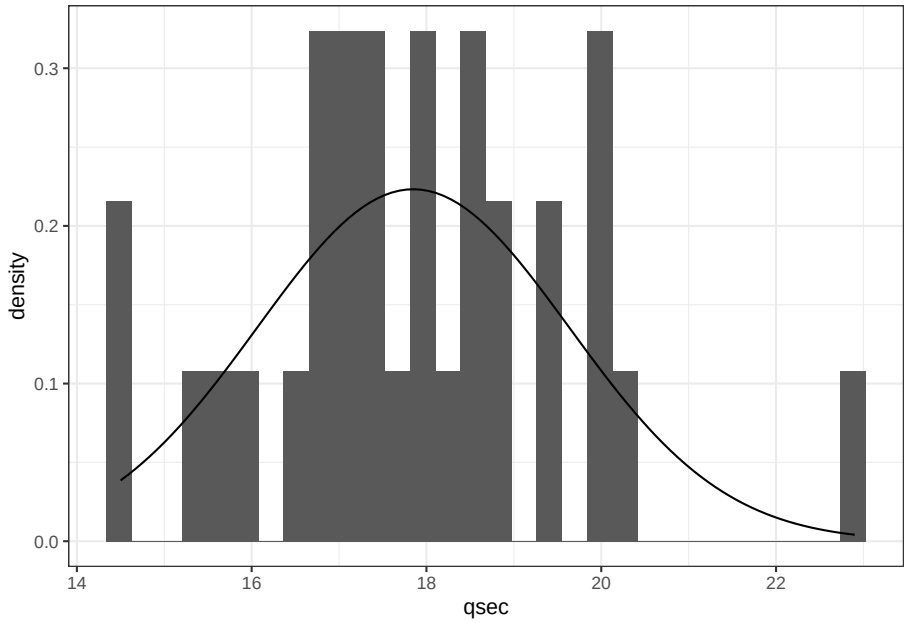

Figure 6.4: **CAPTION THIS FIGURE!!**

```
# ..density.. changes y axis to density, not count. stat function defines normal line based on da
```

6.4.3 multiple plot of all distributions

```
mtcars %>% keep(is.numeric) %>% gather() %>% ggplot(aes(value)) + facet_wrap(~ key, scales = "fre
```

```
## `stat_bin()` using `bins = 30`. Pick better value with `binwidth`.
```

6.4.4 x*y scatterplot with linear regression or polynomial regression

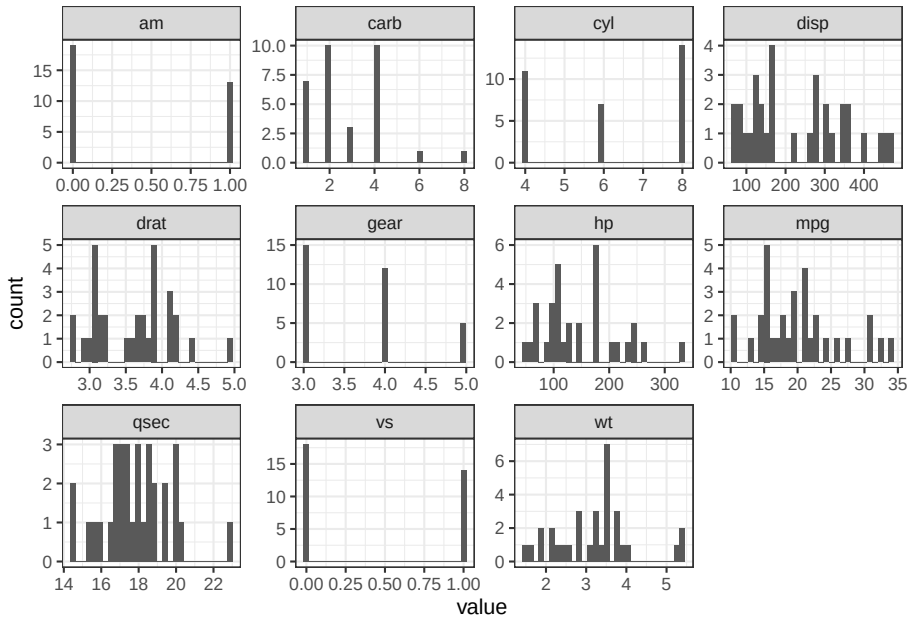

Figure 6.5: **CAPTION THIS FIGURE!!**

```
plot2<- mtcars %>% ggplot(aes(x=wt,y=qsec))
plot2a <- plot2 +geom_point()+stat_smooth(method='lm',formula=y~x) + theme_bw()
plot2b <- plot2 +geom_point()+stat_smooth(method='lm',formula = y ~ poly(x, 2)) + theme
plot2c <- plot2 +geom_point()+stat_smooth(method='lm',formula = y ~ poly(x, 3)) + theme
plot2d <- plot2 +geom_point()+stat_smooth(method='lm',formula = y ~ poly(x, 4)) + theme

grid.arrange(plot2a,plot2b,plot2c,plot2d,nrow=2,ncol=2)
```

6.4.5 Add formula to plot.

```
my.formula <- y ~ x
a <- plot2 +geom_point()+geom_smooth(method='lm',formula=my.formula)+stat_poly_eq(formu

my.formula2 <- y ~ poly(x, 2)
b <- plot2 +geom_point()+geom_smooth(method='lm',formula=my.formula2)+stat_poly_eq(form

grid.arrange(a,b,nrow=1)
```
